

Project Documentation Phase – EduGenie

A structured and comprehensive guide covering requirements, architecture, design, testing, usage, and maintenance for the EduGenie application.

1. Introduction

The Project Documentation Phase is the stage where all important information about the EduGenie project is collected, organized, and recorded. It provides a complete reference for understanding, developing, using, and maintaining the system.

2. Objectives of Documentation

- To record all project requirements and specifications.
- To explain the system design and development process.
- To document the features and functionalities of EduGenie.
- To provide guidance for users and developers.
- To make future maintenance and updates easier.

3. Types of Documentation

1. Project Requirement Documentation

Contains the functional and non-functional requirements of EduGenie.

2. System Design Documentation

Describes the system architecture, database design, modules, flowcharts, and diagrams.

3. Development Documentation

Contains information about programming languages, tools, technologies, APIs, and development methods used.

4. Testing Documentation

Includes test cases, test results, identified bugs, and corrections made during testing.

5. User Documentation

Provides instructions for students on how to register, log in, use the AI assistant, access study materials, attend quizzes, and check progress.

6. Maintenance Documentation

Contains information required for fixing problems, updating features, managing the database, and maintaining the system.

4. Important Contents

- Project introduction
- Problem statement
- Objectives
- Scope of the project
- Requirement analysis
- System design
- Technology used
- Module descriptions
- Database structure
- AI integration details
- Testing methods and results
- Screenshots of the application
- User instructions
- Future enhancements
- Conclusion

5. Documentation Process

1. Collecting project information.
2. Recording requirements and specifications.
3. Documenting the system design.
4. Recording development details.
5. Adding testing results.
6. Adding application screenshots.
7. Preparing user instructions.
8. Reviewing and updating the documentation.

6. Documentation Tools

Various tools can be used to prepare the project documentation, such as:

[Microsoft Word](#)[Google Docs](#)[PDF Tools](#)[Diagram & Flowchart Tools](#)[GitHub \(Technical Docs\)](#)

7. Expected Outcome

The expected outcome is a complete and well-organized project document that explains every major aspect of EduGenie, from requirements and design to development, testing, and maintenance.

8. Conclusion

The Project Documentation Phase provides a complete record of the EduGenie project. Proper documentation makes the project easier to understand, maintain, update, and present. It also helps developers and users clearly understand the working and features of the system.
